

JOINT ACTIVITIES OF COKE PRODUCTION OF PJSC «ARCELORMITTAL KRYVYI RIH» AND THE INDUSTRY RESEARCH INSTITUTE IN ISSUES OF THE STANDARDIZATION

© **V.V. Burdiyan, N.V. Mukina** (Coke Production of PJSC «ArcelorMittal Kryvyi Rih», 50095, Dnipropetrovsk region, Kryvyi Rih, Kryvorizhstal str., 1, Ukraine), **N.M. Golik, A.E. Ablaeva** (State Enterprise "Ukrainian State Research Coal Chemical Institute (UHIN)", 61023, Kharkov, Vesnina st., 7, Ukraine)

The article provides the scientific and methodological foundations for the development of regulatory documents for the production of products of a given quality on the example of cooperation between the relevant structural units of the State Enterprise "UKHIN" and the Coke production of PJSC "ArcelorMittal Kryvyi Rih" in accordance with the current requirements of the legislative framework of Ukraine. The definition and goals of standardization of by-product coke production has been formulated. The definition of the types of regulatory documents for coke-chemical products, which are being developed and applied in Ukraine at the present time, has been given. A list of technical standards has been presented, developed over the last two years at the request of PJSC "ArcelorMittal Kryvyi Rih" to expand the range of products, taking into account the raw material base, features of production facilities and the production process.

After carrying out the necessary examinations and approvals, the draft technical standards and changes in them are tested in the regional state enterprise, which forms and ensures the implementation of state policy in the field of technical regulation. After verification, they are transferred to the Main Fund (the holder of which is the State Enterprise "Ukrmetrteststandard") for entering into the database "Technical conditions of Ukraine". The advantages of being included in this database has been shown, which, although it is voluntary, allows consumers and all interested organizations to make sure that regulatory documents are checked and taken into account that they comply with legal requirements.

The article also shows the relevance of the issue of transportation and labeling of dangerous goods for each type of goods produced by the company. The procedure has been described for the classification of goods, which covers the assignment of a product to a specific hazard class, category and packing group.

Keywords: *standardization, regulatory document, technical committee for standardization, technical conditions, transportation, dangerous goods, safety data sheet, toxicological and hygienic passport.*
